DB ECOsystems' environmentally friendly biocide, AEROS®, is a 21st century product for infection prevention and control applications. The emergence of persistent, antimicrobial-resistant microorganisms in the healthcare setting is posing a major problem for clinical staff and patients alike. New techniques aimed at reducing the risk of transmission from the hospital environment should complement the continuing development of novel treatments for infection.

Over the past year the company has been working in collaboration with Napier University to research the bactericidal activity of AEROS®, in particular against clinically relevant and antibiotic-resistant organisms, such as MRSA. We have strengthened our ties with academic research, and become involved in the running of both undergraduate and postgraduate projects. Much of this work has involved testing the activity of AEROS® in accordance with European Standard protocols.

AEROS® has proven to be highly effective against all pathogens tested, and also demonstrates potent activity against bacteria in biofilm form.

For further information please contact Dr Jonny McMichael, Product Development Manager, at DB ECOsystems.
